THE COVID-19 PANDEMIC

Here's everything you need to know

What is COVID-19?

COVID-19 is the disease caused by a new coronavirus called SARS-CoV-2. WHO first learned of this new virus on 31 December 2019, following a report of a cluster of cases of 'viral pneumonia' in Wuhan, People's Republic Of

What are the symptoms?

 Chillis or dizziness.

Symptoms of severe COVID-19 disease include

Other less common symptoms use.

Irritability.
Confusion.

Confusion.

Confusion.

Anylety.
Depression,
Siege disorders,
More severe and rore neurological complications such as strokes, brain inflammation, delirium and nerve damages experience fewer and/or cough associated with difficulty breathing or shortness of breath, cheet poin or pressure or loss a Sepsech or movement should seek medical care immediately. It possible, call your health care provider, hotline or health facility first, so you can be directed to the right clinic.

The time from exposure to COVID-19 to the moment when symptoms begin is, on average, 5-6 days and can range from 1-14 days. This is why people who have been exposed to the virus are advised to remain at home and stay away from others, for 14 days, in order to prevent the spread of the virus, especially where testing is not easily available.

What happens to people who get COVID-19?

Among those who develop symptoms, most (about 80%) recover from the disease without needing hospital treatment. About 15% become seriously ill and require oxygen and 5% become critically ill and need intensive care.

In rare situations, children can develop a severe inflammatory syndrome a few weeks after infection

Who is most at risk of severe illness from COVID-19?

People aged 60 years and over, and those with underlying medical problems like high blood pressure, heart and lung problems, diabetes, obesity or cancer, are at higher risk of developing serious illness.

However, anyone can get sick with COVID-19 and become seriously ill or die at any ago

How can we protect others and ourselves if we don't know who is infected?

Stay safe by taking some simple precautions, such as physical distancing, wearing a mask, especially when distancing cannot be maintained, keeping rooms well ventilated, avoiding arrowds and close contact, regularly cleaning your hands, and coughing into a bent elbow or tissue. Check local advice where you live and work Do it all!

When should I get a test for COVID-19?

Anyone with symptoms should be tested, wherever possible. People who do not have symptoms but have had alose contact with someone who is, or may be, infected may also consider testing – contact your local health guidelines and follow their guidance.

While a person is waiting for test results, they should remain isolated from others. Where testing apocally is limited, tests should first be done for those at higher risk of infection, such as health wedness, and those a

Are there vaccines or treatments for COVID-19?

No, there are no treatments available. Scientists around the world are still working to find and develop treatments for the virus. However, currently several COVID-19 vaccines are in clinical trials with over 50 vaccine condidates.

WHO is working in collaboration with scientists, business, and global health organizations through it ACT Accelerator to speed up the pondemic response. When a safe and effective vaccine is found, COVAX (led by WHO, GAVI and CEP) will facilitate the equitable access and distribution of these vaccines to protect people in all countries. People most at risk will be prioritized.

While we work towards rolling out a safe and effective vaccine fairly, we must continue the essential public health actions to suppress transmission and reduce mortality.

What to do if you start to develop COVID-19 symptoms If you think you have symptoms of COVID-19, it's important to take the following steps

- Stay home. By staying home, you can help prevent spreading the virus to others in your community. Plan to only go out if you need to seek medical care.
- Call your doctor. It's important to let your doctor or healthcare provider know about your symptoms. They may ask you questions about when and how you may have been exposed. Try to answer these to the best of your ability.
- Follow your doctor's instructions. Your doctor will give you instructions on how to care for yourself while you're ill. They may also arrange for you to be tested for COVID-19 if you haven't been tested already.
